## CLAIMS

What Is Claimed Is:

- 5 1. A spunbond fabric having excellent softness and strength, made from the spunbond process, including:
  - (a) extruding filaments composed of at least one component of an ultra low viscosity PP polymeric resin having an MFR greater than 100 from a spinneret;
    - (b) drawing said filaments through a drawing unit;
  - (c) generating a filament speed above 4,000 meters per minute; and
  - (d) creating a fabric of at least one layer from said filaments drawn from said drawing unit.

15
2 A spunbond fabric as in claim 1

- 2. A spunbond fabric as in claim 1, including the additional step of:
- (e) creating a multiple layer composite fabric containing the layer of said filaments received from said drawing unit.

20

10

- 3. A spunbond fabric having excellent softness, strength, barrier properties and air breathability made from the spunbond process, including:
- (a) extruding filaments composed of at least one 25 component of polyethylene terephthalate resins with IV

(intrinsic viscosity) of less than 0.55 from a spinneret;

- (b) drawing said filaments through a drawing unit;
- (c) generating filament speeds above 4,000 meters per minute; and
- 30 (d) creating a fabric from at least one layer of said filaments.
- A spunbond fabric as in claim 3, including the step of:
   providing additional layers of filaments on said one layer
   of filaments to create a multiple layer composite fabric therefrom.
- 5. A spunbond fabric having excellent softness, strength, barrier properties, and air breathability made from a spunbond 40 process, including:
  - (a) extruding filaments composed of at least one component of polyamide (PA6) of R.V. below 2.2 from a spinneret;
    - (b) drawing said filaments through a drawing unit;
- 45 (c) generating a filament speed above 4,000 meters per minute; and
  - (d) forming a fabric of at least one layer from said filaments drawn from said unit.

- 50 6. A spunbond fabric as in claim 5, including the additional step of:
  - (e) creating a multiple layer composite fabric containing the layer of said filaments received from said drawing unit.
- 7. A spunbond fabric having excellent softness, barrier properties, and air breathability made from a spunbond process, including:
- (a) extruding filaments composed of at least one component of polyethylene resin with MFR over 50 from a60 spinneret;
  - (b) drawing said filaments through a drawing unit; and
  - (d) forming a fabric of at least one layer from said filaments drawn from said unit.
- 8. A spunbond fabric as in claim 7, including the additional step of:
  - (e) creating a multiple layer composite fabric containing the layer of said filaments received from said drawing unit.
